

Datasheet biodegradable organic Growboxx® plant cocoon
Part of the Groasis Ecological Water Saving Technology

[Check the video how it works here](#)

With a Growboxx® plant cocoon you can plant a tree in the middle of the box in the soil. It has 4 seed pockets in which you can either plant a little plant or sow a seed. The 4 seeds or plants will root hydroponically in the water. After half a year they will penetrate the degrading bottom of the box and establish in the soil. The Growboxx® plant cocoon has a siphon that collects rain and can be used for a refill. The refill is only necessary if you grow vegetables with it. You can use the Growboxx for 3 different purposes:

- 1 Productive tree in the middle to plant orchards, e.g. vines, olives, etc.
- 1 Productive tree in the middle of the box with 4 vegetables in the seed pockets for planting hydroponically growing vegetables. The vegetables will produce up to 20 kilos which the rural family can sell in the market to make money or eat them. After one year, all costs of the box, the productive tree and the vegetable seeds are paid by the vegetables production. So within a year the family has paid its investment in the productive tree that starts to produce fruits, medicines, oils or wood.
- 5 Trees and plants for ecosystem restoration purposes – this offers the opportunity to plant one tree and 4 bushes and/or wildflowers in order to create colonizing micro-ecosystems of pioneer plants to reforest the area. With only 100 Growboxxes the client can plant 500 pioneer plants per hectare, saving enormous amounts of costs compared to traditional methods.

The Groasis Growboxx® plant cocoon (*)

(*) For commercial purposes the design is coloured. In practice the Growboxx has the brown-yellow colour of paper pulp.

Award” 2014

The Treesolution with the Groasis Growboxx is winner of the Accenture “Green Tulip Innovation

Prosopis (*Mezquite*) in the middle of the soil for carbon production, and Yucca vegetable (*Cassava*) growing in seed pocket

Yucca vegetable (*Cassava*) has grown hydroponically and its roots are already on the bottom of the Growboxx – after app. 6 months the roots penetrate the bottom of the box and establish in the soil

Growboxx® plant cocoon	
Standard parts	Box - lid - siphon cap - 4 seed pockets – blue ball
Color of box	Beige
Color of lid	Beige
Color of cap	Blue
Weight	600 grams (21 oz)
Material	Biodegradable organic recycled paper
Additives water tightness	Food safe additives - no bitumen used
Additives to protect against animals	Food safe additives help prevent attacks from bacteria's - termites - rabbits -hares - goats – sheep. Some termite populations are not sensitive and will still attack
Water transport to tree	No wick - water transport through capillary bottom
Temperature resistance	Between - 40°C to + 80°C (-40°F to +176°F)
Diameter x height	L40 x w 40 x h 20 cm (16 x 16 x 8 inches)
Rainwater harvesting	Yes
Complete sets per pallet	400 for sea freight on 80 x 120 cm (32 x 48 inches) pallet size
Complete sets 40Ft HC container	12,000 pieces on 30 pallets
Water gift per day	On average 100 cc (cc = milliliter)
Water gift influence	Depending on hygroscopic characteristics of soil
Lid characteristic	Cover has a siphon and surface that is designed to collect rain
Animals	Cover is strong enough to be put below soil against drinking animals
Refill	Siphon in cover allows a quick refill if necessary
Prevention of too deep planting	Box depth only 19 cm in order to establish the roots <i>in</i> the soil and the trunk <i>above</i> the soil
Expected life time	
Growboxx	Box degrades within a year – cover degrades within 5 years
Weed control	Cover keeps on covering the soil during 5 years to prevent weeds and avoid evaporation around the tree
Evaporation of water through lid	Zero
Development of algae in water	Zero
Experience	4 years with 8,000 Growboxxes in 30 countries
	See this video at 6:00 minutes
	See photo gallery here
Patented	In 113 countries since 2012
